

CENTRAL STORE MANAGEMENT SYSTEM

CSMS V2 — Standard User Operations Manual

Document Classification: Official Government Operational Manual
Effective Date: Financial Year 2026-27 | Generated: September 22, 2026
System Version: 2.0 (Clean Architecture Rebuild)
Applicable Entities: Directorate Central Store, Central Press, and Authorized Branch Offices

Operational Notice: This manual outlines the daily execution, approval hierarchies, stock movement protocols, and master administration for CSMS V2. All operations strictly observe single-ledger immutability: stock is never directly edited; every change is captured via an atomic, audit-compliant transaction in the official stock register.

1. System Architecture & Core Business Principles

CSMS V2 is built around rigorous governmental inventory accounting standards. All users must understand these foundational principles:

- **Stock Belongs to Store, Not to Offices, Sections, or Users:** All balances are held by a Store. Directorate has Central Store; Central Press is an independent Branch Office with its own Store.
- **Consumable vs Asset Category Rules:** Items are strictly categorised as either **CONSUMABLE** or **ASSET**. The legacy term 'MATERIAL' is obsolete.
- **Consumable Identity is (Store + Financial Year + Item):** Consumable ledger balances are tracked per financial year. Assets have a continuous, multi-year lifecycle identified by serial/asset number.
- **The StockMovement Ledger is the Single Source of Truth:** Current stock is derived from immutable transaction entries. Direct database balance overwrites are strictly prohibited.
- **Compensating Transactions Only:** Once an issue, receipt, or transfer is posted, it cannot be modified or deleted. Errors are corrected via authorized compensating transactions.
- **Atomic Concurrency:** Every transaction verifies real-time stock balances inside an atomic database lock to prevent negative stock balances during concurrent operations.

2. User Roles, Responsibilities & Access Control

Access to actions within CSMS V2 is controlled by explicit role permissions, organizational scope, and multi-eye verification rules:

Role Name	System Code	Scope & Key Responsibilities	Test Login
System Administrator	SYSTEM_ADMIN	System-wide setup: items, offices, stores, sections, units, roles, and user memberships.	dev_admin
Director / Superintendent	DIRECTOR	Executive oversight, institutional requisitions approval, and policy governance.	dev_director
Deputy Superintendent, Stock & Stores	DEPUTY_SUPDT_STORES	Central Store Controlling Officer: authorizes stock verifications, adjustments, and branch transfers.	dev_deputy
General Storekeeper	GENERAL_STOREKEEPER	Central Store stock custodian: records opening stock, posts manual indents, supplier receipts, and petty purchases.	dev_general_sk
Assistant Storekeeper	ASSISTANT_STOREKEEPER	Executes stock entries, receipts, and issues in Central Store alongside the General Storekeeper.	dev_assistant_sk
Branch Head	BRANCH_HEAD	Branch Office Controlling Officer (e.g. Central Press): authorizes branch indents, verifications, and adjustments.	dev_press_head
Branch Storekeeper	BRANCH_STOREKEEPER	Branch Store stock custodian: handles branch stock movements, branch receipts, and local indents.	dev_press_sk

Default Development Password for all test users: Password@1

3. System Navigation, Dashboard & Store Context

Upon logging in, users are taken to the **Dashboard (Iapp)**. The top header provides critical contextual selectors:

- **Active Store Selector:** Storekeepers and officers assigned to multiple stores must select the store they are currently operating. All registers, stock counts, and transactions filter by this selection.
- **Financial Year (FY) Selector:** Displays transactions for the selected accounting year (e.g., 2026-27). Closed financial years are read-only.
- **Real-time Metrics Cards:** Displays Current Total Consumable Units in Stock, Active Catalogued Items, and Number of Managed Physical Assets.

4. Opening Stock Setup (One-Time / Annual Migration)

Opening stock establishes initial system balances for a store at inception or at the start of an accounting period:

- **No Authorisation Overhead:** Storekeepers assigned to a store may enter opening stock directly without Deputy Superintendent or Branch Head pre-approval.
- **Consumables vs Assets in Single Document:** Opening stock entries support mixed items in a single form. Consumable lines post an OPENING StockMovement. Asset lines register the physical asset numbers and create AssetMovement(OPENING) records.
- **Atomic Posting Guarantee:** If any asset serial already exists or a line is invalid, the entire opening stock voucher rolls back atomically.
- **Procedure:** Navigate to **Stock > Opening Stock** > Click + *New Opening Stock* > Select Store & FY > Add Items, Units, and Quantities > Click *Post Opening Stock*.

5. Manual Physical Indents & Immediate Issue Finalization

The Physical Voucher Workflow: When an indenting officer arrives at the store with a signed physical paper indent, the Storekeeper records it using the **Manual Indent** screen.

- **No Draft State:** An approved physical indent is already an authorized document. Saving it in CSMS V2 **atomically creates and finalizes the Issue** in one step.
- **Key Data Fields:** Item, Unit, *Requested Qty* (from paper indent), *Available Qty* (auto-derived by server), *Issued Qty* (actual quantity physically handed over), and Remarks.
- **Zero and Partial Issues Permitted:** If the requested quantity is 50 but store only has 30, entering Issued=30 is valid. If stock is zero, Issued=0 is valid.
- **Shortage Rule:** Shortages close the manual indent at the actual dispatched quantity. The system **does not** create a phantom pending balance.
- **Stock Deduction:** Saving the voucher immediately writes an immutable ISSUE entry in the StockMovement ledger and produces an Outward Pass.

6. Online Section Indents & Approval Workflows

Online Indents allow section users or officers to submit digital demands through the system:

Step 1: Submission: Section user creates an indent specifying target store, required items, and demanded quantities (Status: SUBMITTED).

Step 2: Verification / Approval: The Controlling Officer (Deputy Superintendent for Central Store; Branch Head for Branch Store) reviews the request. They may approve, reduce quantities, or reject (Status: APPROVED).

Step 3: Issue Finalization: An assigned Storekeeper opens the approved indent, enters the actual physical quantities issued, and clicks *Finalize Issue*. Stock is deducted and an Outward Gate Pass is generated.

7. Branch Requisitions & Central Store Dispatches

Inter-store transfers between Central Store (Directorate) and Branch Stores (e.g., Central Press) use the ****Requisition & Transfer**** module:

- **Requisition Creation:** Branch Storekeeper raises a Requisition targeting Central Store for needed supplies.
- **Branch Head Approval:** The Branch Head verifies and submits the requisition to Central Store.
- **Central Store Authorization:** The Deputy Superintendent, Stock & Stores reviews and authorizes the requisition.
- **Dispatch / Issue:** Central Store General Storekeeper dispatches the accepted quantities. A TRANSFER_OUT stock movement is posted.
- **Receipt at Branch:** Branch Storekeeper acknowledges receipt of the shipment. A TRANSFER_IN stock movement is automatically posted into the branch store ledger.

8. Supplier Receipts & Asset Acceptance

External procurement items entering the store are accepted via the ****Receipts**** module:

- **Accepted Quantity Enters Stock:** If 100 units arrive from a vendor, 10 are rejected during inspection, and 90 are accepted, **only the 90 accepted units** enter stock.
- **Consumables:** Posted as RECEIPT movements with batch and unit cost details.
- **Assets:** Individual serial/asset identification tags must be entered for each accepted unit. The asset record is created in IN_STORE status.

9. Petty Purchase (Consumables Only — Asset Petty Purchase Prohibited)

Petty Purchase is an acquisition mechanism for urgent consumable purchases. Non-negotiable rules:

- **Strictly Consumable Only:** Asset petty purchase is prohibited by system policy.
- **Two-Man Rule:** Created by the assigned Storekeeper; verified/authorized by the Controlling Officer (Deputy Superintendent for Central Store; Branch Head for branch store).
- **Immediate Issue Option:** If items were bought to satisfy an existing approved indent, immediate issue can be toggled. Purchased IN and Issue OUT are posted **atomically** under the same posting group ID.
- **Temporary Items:** If an item is not in the permanent master catalog, it is entered as a temporary item (is_temporary=true) to allow stock tracking without delaying operations. It can be promoted to a permanent master item later.

10. Stock Verification, Discrepancies & Adjustments

Stock verification enforces periodic physical audits against ledger balances:

- **1. Count Entry:** Storekeeper counts stock and records physical balances against the system snapshot. *A stock verification does not change stock balances.*
- **2. Separation of Duties:** The person who records the verification count **cannot** authorize it.
- **3. Zero Variance:** If physical count equals system stock, the verification closes upon authorization with status VERIFIED_MATCH.
- **4. Variance Handling:** If physical count differs, authorizing it places it in AUTHORIZED status, unlocking controlled **Adjustment In** or **Adjustment Out** records.
- **5. Snapshot Re-check:** Before an adjustment is posted, the system checks whether stock balances changed after the verification was taken. If stock changed, the adjustment is rejected to prevent false reconciliations.

11. Unserviceable Consumables & Asset Lifecycles

- **Consumables:** Damaged or expired consumables are surveyed, authorized by the Controlling Officer, and written off using UNSERVICEABLE stock OUT movements.
- **Assets:** Assets move through explicit lifecycle states: IN_STORE $\rightarrow$ ISSUED $\rightarrow$ UNDER_REPAIR $\rightarrow$ UNSERVICEABLE $\rightarrow$ DISPOSED.

12. Official Stock Registers, Audit Trails & PDF Reports

Every transaction in CSMS V2 is audit-traceable. Users can export standard government register sheets:

- **Current Stock Register:** Real-time balances of all items per store and financial year.
- **Item Ledger / Daybook:** Chronological running balance of all IN and OUT movements for any item.
- **Asset Register:** Complete ledger of physical assets, serials, locations, and current holders.
- **Outward Gate Pass:** Official printable pass with security reference number for dispatched items.
